

SPRING/SUMMER 2017

DOMANI
DOMANI
domani.be

MATERIALS

All our Domani items are handmade in our own European production.

TERRA COTTA

Our own high quality clay has a kaolin basis with special properties. While baking the clay will coalesce so that virtually no absorption of water is possible. Our terra cotta pottery absorbs no more than 3-4% of water. With this low percentage of water our potteries are guaranteed frost proof.

*Not suitable for outdoor: ATLANTIS, BATUR and BUDAPEST collections (because of their shape).
The Raku collection is the only collection made out of a different clay composition.*

RAKU

Raku is a baking technique originated in Japan, in the mid-sixteenth century. During the extreme temperature change of cooling down, crazing or cracking occurs on many of the glazed areas of the pots. The multitude of parameters involved provides results varying at infinity, which gives each piece the quality of single object. NAKED: the glaze has been chipped off the pot leaving an intriguing pattern of smoke lines on the clay after burning.

ZINC

We use titanium-zinc plates soldered together with tin. The tin contains 4% of silver, which makes it extremely durable.

When zinc is exposed to humid air or water it will naturally oxidize. First the zinc will create a white powder to protect itself, then a light grey patina will appear. Our zinc pots are delivered with water drainage on the side.

STEEL

The steel planters are made out of stainless steel. After welding they are treated with a chemical mordant. Then they are powder coated with a textured mat finish.

ICONS

HAND THROWN

These are turned by hand. This makes every pot a unique piece.

ROTATED INSIDE A MALL

In a rotating movement the clay is pushed by a knife into the mall. This special technique is used for the smaller models.

CLUBBED INTO A MALL

Here the clay is hit into the mall by hand. This technique is more suitable for bigger pot.

FROST PROOF

Suitable for outside, winter resistant

WATERPROOF

These are 100% waterproof and can be used as flower vases.

GOOD TO KNOW

PUMPS: The standard warranty of our pumps is 3 years. This warranty can be extended to 5 years : please consult the little leaflet 'warranty extension' for more information. Please be sure to read the large 'Warranty leaflet' very carefully. In case of malfunction and if covered by warranty, please be sure to send us the following : pump + warranty leaflet + copy of invoice for fountain + certificate of warranty extension (if applicable). A pump cannot be exchanged to you if any of these documents are missing.

TREATMENT ZINC: To obtain a more equal patina we advise to treat your planter with water yourself (garden hose). Make the pots wet overall and let them dry for an hour, repeat this a few times.

ECOLOGY: To reduce our ecological footprint most of our pots are not pre-baked or glazed afterwards. We use a technique the French call "monocuisson". Primary baking and glaze-baking happens all at once, using considerably less energy. This is not true for our RAKU collection.

COLOURS: The colors on the pictures might deviate from the colours in real life.

BRANDING: All our terra cotta potteries are branded with our Domani-stamp

NUUK

Everything about Nuuk is grand, its shape, its size, its glaze. Our Nuuk planter will surprise you just as the beautiful city Nuuk in Greenland surprises most of its visitors.

Surrounded by immense nature, Nuuk is filled with vibrant Greenlanders leading fascinating lives of old traditions, modern twists, and diverse influences.

Outdoor pots have a drainage hole and are delivered with rubber feet.

PARIS

Probably one of the most popular cities in the world. Everything about this city is inspiring... its gastronomy, haute couture, painting, literature, architecture, history, secrets... Our new Paris collection has especially been inspired by the Beautiful Iron Lady, the Eiffel tower that looks over her amazing city of lights.

Outdoor pots have a drainage hole and are delivered with rubber feet.

VIENNA

With its baroque streetscapes, imperial palaces, winding cobbled lanes, sweet Kaffeehäuser (where they serve delicious Sachertorte) and cosy wood-panelled Beisl, Vienna is steeped in history. Yet it's also at the cutting edge of design, architecture, and contemporary art. This perfectly reflects our collection Vienna that looks at the same time new and old.

Outdoor pots have a drainage hole and are delivered with rubber feet.

MILOS

The MILOS collection is created by the modeling technique of leaving extra finger imprint on the clay whilst turning. The unique sense of naturalness is intensified through the dying process using colored silt by 'angoben', which is known for not glazing during baking, resulting in a beautiful matte finish.

Outdoor pots have a drainage hole and are delivered with rubber feet.

BAJA

Influenced by nature and its organic forms, BAJA highlights nature's aesthetic dimension. The collection refers to the complexity and the playfulness of the organic reality with their irregular and playful lines, shape and texture. It offers the perfect terra cotta solution when looking for a striking and playful accessory in- and outdoors.

Outdoor pots have a drainage hole and are delivered with rubber feet.

AXEL

POT

Its pure shape and various sizes turned this pot into an instant classic for in - and outdoor use. The colour palette will inspire you in every season, be it in spring with flowers, and in winter without plants. AXEL pots are coloured with a coloured silt by 'angoben' with the special property not to 'glaze' during baking. The result is the beautiful matte colour.

The LUANDA collection was inspired by the structure of the beech. The structure is already integrated into the mall. Both the texture of the material and its deep colours strengthen the feeling of a weathering trunk. The shapes accentuate its simplicity and strength, while the glazing below gives the pots a reflecting mirror.

ZINC

COLUMN POT

Our zinc column pots add a finishing touch to your projects. We use titanium-zinc plates soldered together with tin. Our zinc contains 4% of silver, which makes it extremely durable.

When zinc is exposed to humid air or water it will naturally oxidize. First the zinc will create a white powder to protect itself, then a light grey patina will appear.

** standard with water drainage on the side*
